Enthusiastic Software Developer with strong foundation in Java, Spring Boot, MySQL, and REST APIs, aiming to contribute to innovative backend solutions and enhance problem-solving skills in a challenging organization.

EDUCATION

Srinivas University Institute of Engineering and Technology **Nov 2022 – Nov 2026**
Bachelor of Technology in Computer Science & Engineering, Manglore

Coursework : Data Structures & Algorithms, Operating Systems, OOP, DBMS, Computer Networks

Morarji Desai Residential Pre – University College **Jun 2020 – Apr 2022**
Pre-University Course Ramanagar

SKILLS

Programming Languages & Frameworks : Python **|** Java | JavaScript | HTML | CSS | TailwindCSS | FastAPI

Core CS Concepts : OOP | DBMS| Computer Networks | Operating Systems

Tools & Technologies : Git | GitHub | MySQL | REST APIs | Postman | Jira | Vercel | Render

Soft Skills : Adaptability | Communication | Problem Solving | Ownership | Curiosity | Team Collaboration

EXPERIENCE

AIML Developer Intern | PThinkS **(Present)**
Contributing to the development of AI-based systems by implementing backend features, resolving bugs, and supporting data-driven workflows in a team environment.

MERN Stack Intern | CodeLab Systems **May 2025 – July 2025**
Developed and optimized full-stack features using React, Node.js, Express, and MongoDB by building REST APIs, implementing JWT authentication, improving database query performance, handling middleware and errors efficiently, and collaborating in an Agile team using Git, code reviews, and sprint planning.

PROJECTS

AI Trading Platform | Python , PostgreSQL , React , RESTApis | In Progess
An AI Trading Platform is an intelligent system that uses machine learning and real-time market data to analyze trends, predict price movements, and automate trading decisions.
It helps users identify profitable opportunities, reduce risk, and execute trades faster with data-driven insights, making trading smarter, more efficient, and less dependent on manual analysis.

College Management System | Java**,** JavaScript , MySQL, CSS
A **College Management System** is a centralized software platform designed to manage and automate academic and administrative activities of a college.
It handles student records, attendance, courses, exams, faculty details, and communication in one place, improving efficiency, reducing paperwork, and enabling smooth day-to-day operations.

Geo Poverty Analyzer | Python , Cloud, React, Node, PostgreSQL
Developed a Geo Poverty Analyzer that leverages geospatial data to identify poverty hotspots and support targeted development planning.

CERTIFICATIONS

- **Database Management Certification -** Concepts of SQL, normalization, indexing, transactions, and database design
- **Secure Coding in Java and SpringBoot** - Applied secure coding standards in Java and Spring Boot, ensuring safe authentication, input validation, and secure API development.
